Alternative cosmology

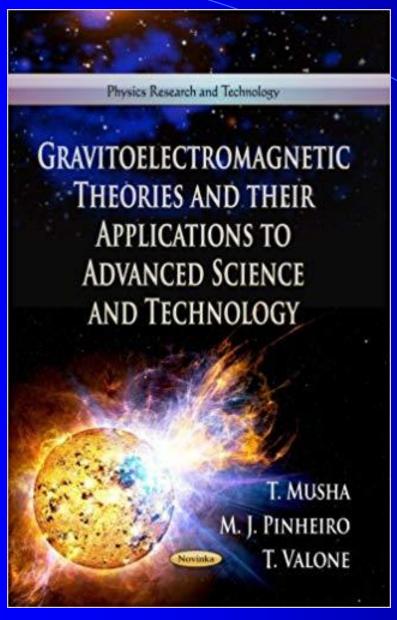

A tachyon is a hypothetical particle that always moves faster than light speed. In this book, the author will present theories showing the cosmic background radiation (CBR) is due to Cherenkov radiation from tunneling superluminal photons created in a ZPF vacuum, cosmological redshift of propagating photons is due to energy loss induced by an interaction of them with the background field of superluminal photons generated in a ZPF vacuum, corona heating of the Sun is due to Cherenkov radiation from tachyons created inside the Sun, as a consequence of tachyon plasma created in the intergalactic space there is no dark matter and there was no Big Bang in the past caused by the instability of space-time continuum.

There is no Big Bang and dark matter & energy based on tachyons.

ビーフェルド・ブラウン効果

The first chapter introduces the historical background of electrogravity, especially on the Biefeld-Brown effect. The second chapter gives several explanations on the Biefeld-Brown effect and other related phenomena, with a concern on the Einsteins Unified Field Theory of Gravitation and electromagnetism and gravitational anomaly induced by the massive electrostatic charges of planets.
